IPA (SIL) keyboard for Keyman Desktop

Keyboard Layout

The keyboard layout is described in terms of an IPA chart rather than a keyboard. This is because many base characters are typed as a sequence of a letter followed by one of <, >, = or | which are characters used to change a base character to another base character. Diacritics are typed as sequences of an appropriate key. Blue denotes non-IPA sanctioned phonetic symbols (they may be used by other traditions such as Americanist, Chinese or Russian).

As described above (and below), the default for this keyboard is to type a letter followed by a "modifier". For example, this sequence "b>" would produce "b". If you wish to use the opposite sequence (>b) that is possible. Use one or the other of these options. **Do not turn** *Before* **on with Keyman configuration and off with the RALT hotkeys.**

- 1. **Using Keyman Configuration**: On Windows, go to **Keyman Configuration**, select the keyboard, click on **Keyboard options** and choose **Before**. You may need to exit Keyman configuration before the default behavior changes. This method will change your default to *Before* and everytime you switch to this keyboard it will remain using the *Before* style until you change it back to *After* style using **Keyman configuration**.
- 2. **Using RALT hotkeys**: It is also possible to switch from *After* to *Before* using the RALT HYPHEN sequence (RALT+-). Switch back to *After* using the RALT EQUAL sequence (RALT+=) (RALT+SHIFT+= on a German keyboard). This method will change to *Before* during just this session of using the keyboard. After you stop using the keyboard it will return to *After*.

Consonants

In this section, if you turned on **Before** in **Keyboard options**, you will type the opposite sequence to what is in the below table. For example, this sequence "b>" would produce "b".

	Bilal	bial		bio- ntal	Der	ntal	Alv	eolar	Post alveol		Ret	roflex	Pa	ılatal	٧	elar	U۱	/ular	Pharyngeal	GI	ottal

Where symbols appear in pairs, the bottom one represents a voiced consonant. Shaded areas denote articulations judged impossible.

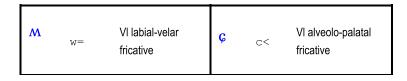

Other Consonants

In this section, if you turned on **Before** in **Keyboard options**, you will type the opposite sequence to what is in the below table. For example, this sequence "=p" would produce "O".

Suprasegmentals

In this section, if you turned on **Before** in **Keyboard options**, you will type the opposite sequence to what is in the below table. For example, this sequence "<." would produce "|".

1	}	Primary stress
1	} }	Secondary stress
e:	:	Long
e'	::	Half long
e::	:::	Extra long
ĕ	***	Extra short
	. <	Minor (foot) group

	•	Syllable break
J	#=	Linking (absence of a break)

Other (non-IPA) Vowels

In this section, if you turned on **Before** in **Keyboard options**, you will type the opposite sequence to what is in the below table. For example, this sequence ">A" would produce " \approx ".

æ	A>		α	a	open central unrounded vowel
ι	i	near-close near-front unrounded	A	A	open central unrounded

ŧ	I>		1	z	unrounded alveolar apical
Ŧ	I<	lower-high central unrounded or high back unrounded	ι	Z	unrounded retroflex apical
U	U>	high front rounded	ч	уΙ	rounded alveolar apical
۵	u	near-close back rounded	પ	Υļ	rounded retroflex apical
Е	E	mid front unrounded			
8	e	open-mid front rounded			

Tone and Word accents

In this section the keystrokes are the same whether you turned on **Before** or not.
